Abstract

The instrument case consists of a base (1) to contain the instrument, designed to fold when in the open position to act as a stand for the instrument. The two sections of the base can be locked in the open or closed position by a rack (6), or by having a braked hinge (5) between them. The lid of the case is divided by a transverse bar to form a compartment which acts as a music stand. The bar being made to fold away when not in use. In a variant of the design the lid can contain a number of supports for bars at different levels, or it can house a folding music stand.
